

Password Safety Assessment

Pablo R. & Antoine A.
Sales Rep. @ Estatus Inc.

<http://inutile.club/estatus/>

Passwords are important

- Using **secure passwords** is an important step to ensure that your **personal data** and online identity cannot be compromised.
- Studies show that **up to 65%** of computer attacks and security threats online could be prevented by using **strong, secure passwords**.

Password Policies

- Password policies are usually **complicated**.
- Example policies :
 - the use of both upper- and lower-case letters
 - inclusion of one or more numerical digits
 - inclusion of special characters, e.g. @, #, \$ etc.
 - prohibition of use of company name or an abbreviation
- Do such policies **guarantee** secure passwords ?

Security Password Checker

- Forget about password policies !
- **Estat** Password Security Checker evaluates the **strength** of your current password and offers **suggestions** about possible **attack vectors**.
- Free online service !
